# FRAGBAZ

## PLAY / MAKE MAPS / REPORT BUGS

### 01 / Activate and play

Extract the whole ZIP into a writable folder. Allow 2 GB free for content and caches. Windows x64 and a Vulkan graphics driver are required. The editors include their runtime.

Open fragbaz.exe. Paste the tester key from your invitation. The same activation unlocks fbmap.exe and fbplume.exe. Keys expire; request a replacement from your host. Keep the key private.

Start with New Game > REPAIR CONVOY, 12 actors. Restore the central relay, recover the cargo module through its east opening, then deliver it to the west socket. Two workers charge faster. Protect the carrier. If the module is destroyed, restore the relay and hold west extraction for eight seconds. Time limit: five minutes.

| | |
|---|---|
| WASD / mouse | Move / look |
| Space / Ctrl | Jump / crouch |
| Left / right mouse | Fire / hold focus aim or sniper scope |
| R or middle mouse | Alternate fire |
| 1-8 / F | Select weapon / use |
| Tab | Teamwork scoreboard |
| Escape | Pause menu: Resume, settings, Quit |
| F1 | Operator menu |

Optional mutators: V shield, C jetpack, G grapple, Shift parkour. Q places a rebound panel; B deploys cover when available. Adjust sensitivity in Aim. Short bursts control heat and spread.

### 02 / Feedback

Record the map, mode, actor count, weapon, action and steps to reproduce. Include a short clip if useful. Run Collect Bug Report.ps1 from the game folder, review the local report, fill in REPRO.txt and submit it through the download page's Bug report link. Nothing uploads automatically. Never attach your key.

Performance: the prior 1,024-bot / 18,000-tick test had 0 work overruns, 4 late completions and 14.99 ms worst work. The current update changes startup/menu/rendering only; no new 1,024-client certification. Start small. Art, animations and balance remain alpha quality.

# CREATE CONTENT

## 03 / Map editor: fbmap.exe

| | |
|---|---|
| 1. Open | Open maps/turbine.fmap. Save As your own name. |
| 2. Edit | Use top/front/side views and 3D. Place brushes, cover, pickups and at least two spawns. Undo/redo and properties are available. |
| 3. Check / Bake | Fix errors. Bake writes build/maps/<name>.fbmap. |
| 4. Play | Play saves, bakes and launches the game. Stop ends that test. |
| 5. Share | Copy the final .fbmap into maps/; restart the game to discover it. Share .fmap and .plume too if others should edit. |

Reuse prop and texture paths from supplied maps. Runtime formats: .fbmap maps, PNG textures, FBM1 meshes, FBS1 rigs. Decorative smoothing does not add matching curved collision. Generic FBX/glTF importing is not included.

## 04 / Plume editor: fbplume.exe

| | |
|---|---|
| Start | Open plume/examples/e1_lava.plume. Save As maps/my-arena.plume. |
| Check / Test | F5 checks; Ctrl+S saves. Select maps/switchyard.fbmap for the supplied examples. Test runs their assertions. |
| Build / Install | Build makes .logc. Select your baked map, then Install in map. |
| Run / Cost | Run is a bounded 32-actor, 600-tick headless simulation. Cost estimates a 1,024-actor budget; measure real play too. |

After every map rebake, install the Plume program again. Rebaking replaces its compiled LOGC section. A .plume sidecar alone does not run in the game.

## Before sharing

Test spawns, both teams, deaths, objectives, collision and escape routes. Keep versioned copies. Custom Plume content is for local bot testing in this alpha; arbitrary scripted state is not certified for network replication. Preserve the supplied media credits when sharing adapted content.

Reference maps: Convoy, Crucible, CRUX, DYNAMO, Relay, Switchyard and Turbine. Credits and license details are in Credits.pdf and licenses/. Engine, editor and compiler implementation source is not included.
